# Gulf Control Euroscope Sectorfile

Made by

Abdelrahman M. Elfeky

VERSION 2

JUNE 2011

This package contains:

1- Gulf Control sector compatible with Euroscope 3.1d.

2- Eurocat 2000E plugin and Tag system, imported from Vatsim Scandinavian vACC.

3- Euroscope Users Guide.

4- Euroscope Quick-start guide

To Get started:

To get started, please replace this package under 'MyDocuments/Euroscope' folder and use the GULF.prf to start the profile. Make sure you set the sound settings properly before starting your session, further adjustments on colors , TAG and other settings are upon your choice.

Important Notes:

1. This sector was originally generated by Mr. Miguel Frias and it been adapted for GULF_FSS by Mr. Abdelrahman M. Elfeky.

2. This sector was not tested with VRC and therefore no support is provided.

3. The Eurocat2000E Plugin is made optional and won't be installed by default, in case you would like to do so, please replace the two files inside 'Eurocat2000E' folder and install the plugin inside ES. For further details , please consult ES manual.

4. It is recommended to update the file 'airway.txt' inside your Datafiles folder in ES, as it will provide a more up-to-date solution for not showing the airways. Remember! GULF_FSS is a very vast airspace where a lot of airways exists and showing all of them might slow ES and therefore it's recommended to uncheck all airways under 'Display' dialog.

5. This sector will be maintained once every three months (Please use the sector download feature to obtain the latest version). Generally speaking, the real civil aviation authorizes in Middle East don't apply a whole a lot of changes in their sectors and therefore this virtual sector won't be affected much.

6. Please use the "Download sector files'' menu to receive the updated version of this sector file. For more details , please consulate the ES manual.

To-Do list:

1. I had included only Terminal areas in UAE , KSA and Egypt and therefore If any _APP in any other place is online , ES won't recognize him. I will fix this in Version3.

2. Upon release of verison 3 , I will run a quick update over the airways and fixes to make sure that they all match the latest Airac on that time.

THANK YOU!

Sector ,For offering help in building this sector

EuroCat2000E, For making such fantastic plugin available publically
